Profile

Senior Product Engineer at Predigle (promoted twice since 2024) with 4+ years of experience shipping production web applications in TypeScript, Angular, React and Next.js across healthcare, logistics, adtech and automation. I own features end to end, from the first design decision to the production deploy.

I work in an agentic, AI-assisted workflow (Claude Code, MCP, custom agent skills), and over the last six months I have extended into the backend with Python, Django and MongoDB while preparing for AWS.

Technical Skills

Frontend	TypeScript, JavaScript (ES6+), Angular (17+), React.js, Next.js, React Native, HTML5, CSS3/SCSS
State & Architecture	RxJS, NgRx, Redux, Context API, Microfrontends, Webpack Module Federation
UI & Quality	TailwindCSS, Material UI, Chart.js, D3.js, Framer Motion, WCAG/A11y, Jest, Lighthouse
Agentic AI Dev	Claude Code, Model Context Protocol (MCP), custom agent skills, AI-assisted code review & debugging, prompt engineering
Backend	Python, Django, Django REST Framework, MongoDB, REST APIs, WebSockets *(working knowledge, 6 months hands-on)*
Cloud & Tools	AWS fundamentals: EC2, S3, IAM, Lambda *(learning)*; Git, CI/CD, Firebase, GraphQL, Webpack

Work Experience

Predigle Chennai, India (Hybrid)
Senior Product Engineer *Sep 2026 – Present*
Product Engineer *Nov 2025 – Sep 2026*
Software Developer *Feb 2024 – Nov 2025*
Promoted twice in 2.5 years.

- Designed a microfrontend architecture with Angular 17 and Webpack Module Federation that split the platform into independently deployable modules, so multiple teams release without blocking each other.
- Build healthcare product features across Angular and Django: patient and provider modules, lookup-driven forms, and a document-intelligence app (SmartDoc) where users review and correct entities extracted from medical documents.
- Contribute to Django REST APIs backed by MongoDB, adding endpoints, search and lookups, and working on the API contract together with the Angular apps that consume it.
- Built the real-time logistics dashboard the operations team uses daily. It streams live shipment data over WebSockets and flags anomalies as they happen, which replaced much of the manual monitoring.
- Worked on a Next.js configuration platform that helps users set up and purchase medical equipment, turning structured machine data into flows non-technical users can navigate.
- Introduced an agentic coding workflow with Claude Code: wrote project-specific agent skills that encode our backend, frontend and full-stack conventions, and connected MCP tools for faster debugging and review.

- Kept Lighthouse scores above 90 through code splitting, lazy loading and RxJS subscription cleanup.
- Run design and code reviews and mentor junior engineers on Angular patterns and TypeScript.

Freelance Remote
Frontend Consultant *Oct 2023 – Feb 2024*

- Built dashboards and internal tools for early-stage startups using React and Angular, with Chart.js and D3.js visualizing the metrics each team tracked most closely.
- Ran a performance pass on one client's app, reducing bundle size and improving First Contentful Paint through code splitting and CDN changes, with clear gains on slower connections.
- Set up a component library and design system that gave another team a consistent frontend foundation.

FivoTech Bangalore, India
Software Developer *Oct 2022 – Sep 2023*

- Built a map-based billboard tracking system for the US market with Angular and the Google Maps API, using real-time geolocation and custom marker clustering to keep a large inventory usable at scale.
- Built the backlink analyzer and keyword research features for TaskTools, an SEO productivity platform, including data tables with filtering, sorting and infinite scroll.
- Developed a LinkedIn outreach automation tool that stayed within platform rules while removing repetitive manual work for users.
- Built drag-and-drop interactions and a reusable component library for a no-code page builder.

DynaNet Online Support Bangalore, India
Web Developer *Mar 2022 – Oct 2022*

- Built React modules for a campaign management automation platform, designing workflows users could set up without assistance.
- Refactored the component library to atomic design principles, reducing duplicated code and making components easier to test and extend.
- Integrated REST APIs across several views and built mobile-first layouts for a product used mainly on phones.

Key Highlights

- Promoted from Software Developer to Senior Product Engineer at Predigle within 2.5 years.
- Built and maintained 10+ production applications across healthcare, logistics, adtech, automation and enterprise tools, serving thousands of users.
- Led 0-to-1 builds at Predigle and in freelance work, owning scoping, architecture and delivery to production.
- Brought agentic AI development into the team's daily workflow with Claude Code and custom agent skills.

Education

Dr. MGR Educational and Research Institute Chennai, India
B.Tech, Computer Science Engineering *Sep 2019 – Mar 2023*
